RapidMoney

GROWTH PRODUCT TEARDOWN

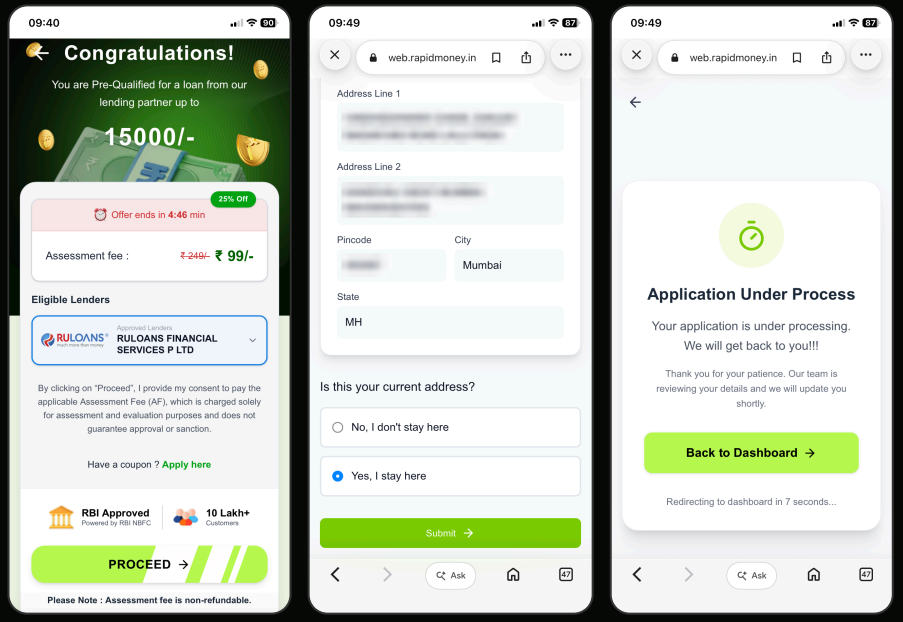

Web Loan Journey & Assessment-Fee Funnel

Fewer steps before the money, clearer terms at the money, and every paid application moving to a decision

First-person exploration of web.rapidmoney.in on mobile · opportunity assessment

RapidMoney website, public positioning (screenshot)

Observed screens: assessment-fee page, CKYC address confirmation (redacted), application under process

PREPARED BY
Chetan Singh

DATE
11 November 2026

COMPANION FILE
Illustrative funnel model (.xlsx)

Scope: mobile signup to "Application Under Process" and the dashboard. Credit decision, KFS, bank and mandate set-up, e-sign and disbursal were not reached. Personal details are redacted. All business figures in this document are illustrative, not RapidMoney data.

What I observed, and where the opportunity is

I applied on RapidMoney's web journey on my phone and took notes on every screen. I paid the ₹99 assessment fee and finished identity checks. The application reached "Under Process" and stopped there: no decision, SMS or email followed.

₹99 → ₹101.36
Fee shown vs amount debited, extra not disclosed

₹15,000 vs ₹20,000
Headline offer vs lender card on the same page

6 of 6 boxes
Consent purposes, all mandatory, incl. marketing

0 updates
No outcome, SMS or email after paying

01 The fee page sends conflicting signals

OBSERVED

Offer up to ₹15,000 above, ₹20,000 on the lender card. "25% off" on a ₹249 → ₹99 cut. ₹99 shown, ₹101.36 debited. Listed coupon rejected. Countdown timer.

PROPOSAL

One amount, one all-inclusive price, plain purpose, no timer.

02 Consent and KYC happen after the customer pays

OBSERVED

Fee paid at 09:42. Data consent at 09:45, CKYC at 09:46, selfie at 09:48. The fee is non-refundable.

HYPOTHESIS

Customers who decline consent or fail KYC after paying become "paid, no loan" cases and complaints.

03 The customer types what the system fetches later

OBSERVED

Seven typed fields on basic details, no visible PAN check. CKYC later returned the address. Session expired about 2 minutes in.

PROPOSAL

PAN-led verify-and-prefill; longer session that keeps entered data.

04 Status language contradicts itself

OBSERVED

"Approved for further processing" → "Submit & check eligibility" → "Under process" → dashboard "Complete application, 62%", "approval in 2 mins".

PROPOSAL

One status model, one next action, a stated timeline and SMS/email updates.

05 Consent is long, repeated and all-mandatory

OBSERVED

Six checkboxes, all required, including marketing. Bureau consent asked again on the CKYC screen.

PROPOSAL

One screen: required purposes itemised, marketing optional. Legal to confirm.

06 Some patterns already work

STRENGTH

CKYC address shown for Yes/No confirmation. Camera permission explained before the browser prompt. Non-guarantee disclosed. KFS language offered.

PROPOSAL

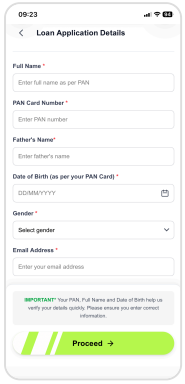

Keep them and extend the confirm-not-type pattern to identity fields.

Charge only when the customer understands what they are paying for, and make every paid application move to a decision.

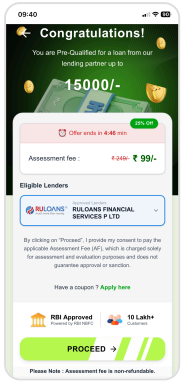

Observed = what I saw as a borrower. Hypothesis = untested explanation. Proposal = what I would evaluate. No RapidMoney metric is stated anywhere in this document.

Reconstructing the journey, screen by screen

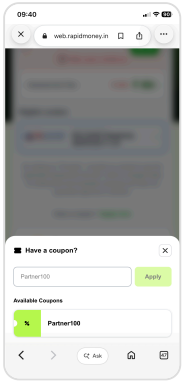

Order follows screenshot timestamps and my notes. The 27 minutes include note-taking, so no step timing is inferred. Everything after step 13 (decision, KFS, bank and mandate, e-sign, disbursal) was not reached.

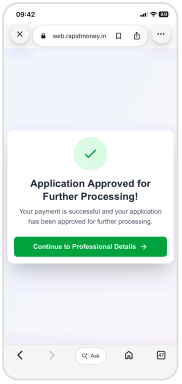

3 Basic details

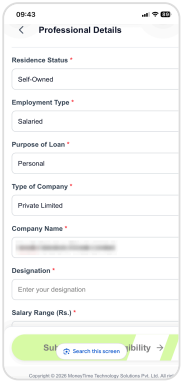

4 Fee page

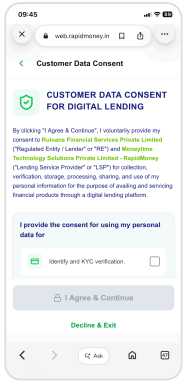

5 Coupon

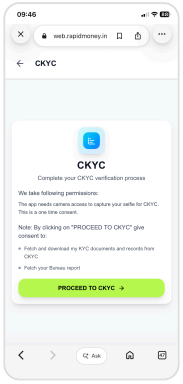

7 Interstitial

12 Address

13 Review

14 Dashboard

#	Screen · time	Customer action / information requested	Friction observed	Potential impact (hypothesis)
1	**Landing (desktop)**	"Apply Now" or "Apply Now / Login"	Two entry CTAs; not analysed in depth	—
2	**Mobile signup + OTP** (notes, no screenshot)	Mobile number, OTP	No email verification; no consent screen observed at signup *(needs validation)*	Unverified email may break later communication
3	**Loan Application Details · 09:23**	Name, PAN, father's name, DOB, gender, email, pincode: 7 mandatory, all typed	No prefill; no visible PAN check or name match; session expired ~2 min in (notes); key guidance sits below the fields	Largest form at the highest-volume step; typos carry into KYC and bureau match
4	**Pre-qualified offer + fee · 09:40**	Review offer, tap PROCEED to pay ₹99	₹15k vs ₹20k; "25% off" mislabel; timer; one-sentence fee purpose; "non-refundable" below CTA; no indicative terms	Trust loss and complaints at the payment moment
5	**Coupon sheet · 09:40**	Enter or pick a coupon	Partner100 listed as available, then rejected as invalid	Broken promise right before paying
6	**Payment gateway** (notes)	Pay	₹101.36 debited vs ₹99 shown	Perceived hidden charge
7	**"Approved for Further Processing!" · 09:42**	Tap to continue	"Approved" shown after payment, before any assessment; extra tap	Expectation set that later screens contradict
8	**Professional Details · 09:43–44**	Residence status, employment type, loan purpose, company type, company name, designation, salary range, salary mode, KFS language (9)	Mixed topics under a business label; CTA "Submit & Check Eligibility" contradicts step 7	Effort and confusion after commitment
9	**Customer Data Consent · 09:45**	Tick 6 boxes, all required; "I Agree & Continue" or "Decline & Exit"	Dense legal text; marketing bundled with required purposes; consent after payment	Paid customers can exit here without a loan
10	**CKYC · 09:46**	Tap "PROCEED TO CKYC", consenting again to CKYC and bureau	Repeat consent; jargon; screen exists only to start a background step	Avoidable step
11	**Take Selfie · 09:48**	Allow camera, liveness check	Good permission priming; "will get approved fast" implies approval	Low
12	**Address from CKYC · 09:49**	Confirm "Yes, I stay here"	Strength: fetched, not typed. "MH" abbreviation; pincode was already typed at step 3	Low
13	**Application Under Process · 09:49**	None; auto-redirect in 7 s	No timeline; "We will get back to you!!!"; no SMS or email received	Uncertainty after paying; support contacts
14	**Dashboard · 09:50**	"Complete Application" → loops to "in progress"	62% complete, "Loan approval in 2 mins" while under review; Loan and History tabs show the same view (notes)	Mixed signals; repeat visits

Make the customer a reviewer, not a data-entry operator

The journey already uses the right pattern once: CKYC fetches the address and asks “Is this your current address?”. The opportunity is to use it earlier, for identity, and to stop asking for the same permission twice.

Asked or explained more than once

OBSERVED

Item	First	Again
Bureau consent	Consent screen, item 2 (09:45)	CKYC screen: “Fetch your Bureau report” (09:46)
Camera permission	CKYC screen	Selfie screen
Pincode / address	Typed on basic details	Returned by CKYC
Identity fields	Typed on basic details	CKYC record fetched later *(which fields: needs validation)*
“Approval”	Pre-qualified (09:40), approved (09:42)	“Check eligibility” (09:44), under review (09:49)

My notes record the bureau fetch right after payment, before the explicit bureau consent screen; the landing tile also says “Bureau based approval”. Which consent covered the pre-qualified offer needs validation.

Session expiry on the longest form

OBSERVED

The session expired about two minutes after login while I was on basic details. A customer fetching a PAN card from another room loses the form.

PROPOSAL

Extend to about 10 minutes for this step, keep entered values, and show a resume link (SMS) if it still expires. Security to confirm the session policy first.

PAN-led verify-and-prefill (concept)

PROPOSAL

Enter PAN → Verify with authorised PAN service → **“Is this you? C**** S****”** → Confirm or correct prefilled fields → Only missing fields typed

Field	Potential source	Consent / authorisation	Customer confirms?	If unavailable or mismatched
Name	Authorised PAN verification service	Purpose-specific consent at PAN entry	Yes, shown masked	Manual entry plus name-match check
Date of birth	PAN verification (match) or CKYC	Same	Yes	Date mask, numeric keypad
Father’s name, gender	CKYC record	KYC consent	Yes	Ask only when CKYC has no record
Email	Google sign-in, or OTP	Customer action	Implicit	Manual entry plus OTP
Pincode, address	CKYC (already used)	KYC consent	Yes (existing pattern)	Manual; current address may differ
Employer, income	Exploratory: bank statement via Account Aggregator	Separate explicit AA consent	Yes	Manual company search, salary band

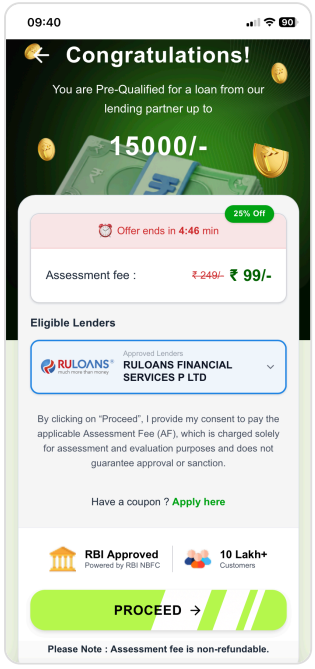

VALIDATION REQUIRED Source availability, cost per call, data retention, lender approval and accuracy. Nothing here assumes RapidMoney can fetch from every source.

Form design, wherever typing remains

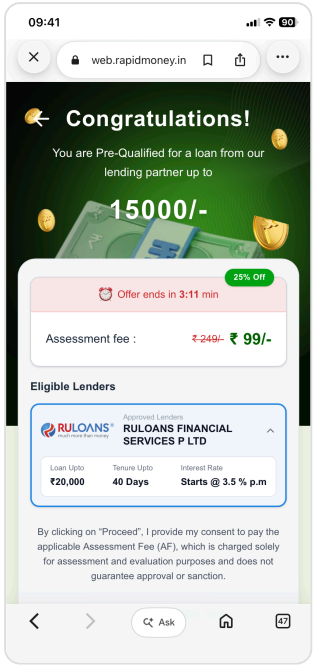

- PAN mask AAAAA9999A, auto-uppercase
- Numeric keypad for pincode, DOB
- Inline errors on blur, not on submit
- “Why we ask” line per sensitive field
- Guidance above fields, not below
- Sticky CTA stays visible
- Progress shown as steps, not a % that can disagree

The fee page: the moment trust is spent or earned

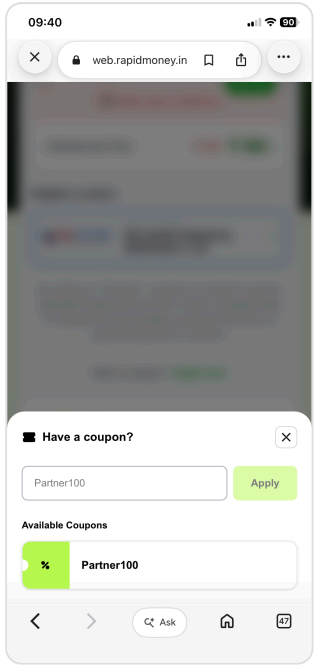

This is the only screen where the customer pays before knowing the outcome. Each inconsistency here is a small cost in conversion and a larger cost in trust, complaints and regulatory exposure.

Fee page, 09:40

Lender card expanded, 09:41

Coupon sheet, 09:40

OBSERVED

Offer conflict	Headline "up to 15000/-"; lender card "Loan Upto ₹20,000". The dashboard repeats ₹15,000.
Discount label	"25% Off" on ₹249 → ₹99, which is a 60.2% cut. 25% off ₹249 would be ₹186.75.
Undisclosed charge	₹99 shown; ₹101.36 debited (+₹2.36, about 2.4%). Not mentioned before payment.
Coupon	Partner100 listed under "Available Coupons", rejected as invalid when applied.
Countdown	"Offer ends in 4:46 min"; 3:11 a minute later. Basis of the ₹249 reference price is not stated.
Approval words	"Congratulations!", "Pre-Qualified", "Approved Lenders" before any assessment.
Trust badge	"RBI Approved · Powered by RBI NBFC". RBI registers NBFCs; "approved" may overstate it.
Fee purpose	One legal sentence, abbreviated "(AF)". "Non-refundable" sits below the CTA.
Terms	Lender card shows 3.5% p.m., up to 40 days. No indicative charges, APR or KFS link on the page.
Fee recipient	The page does not say which entity charges and receives the ₹99.

STRENGTH The fee amount is large and readable. The page says the fee does not guarantee approval. The lender is named.

On my own note: "the non-guarantee line may raise drop-off"

I would keep it. It is the most important sentence on the page; customers who pay without understanding it are the ones who complain later. The fix is framing: say what the fee does pay for, then say it is not a guarantee.

Regulatory context that turns these into questions for Compliance

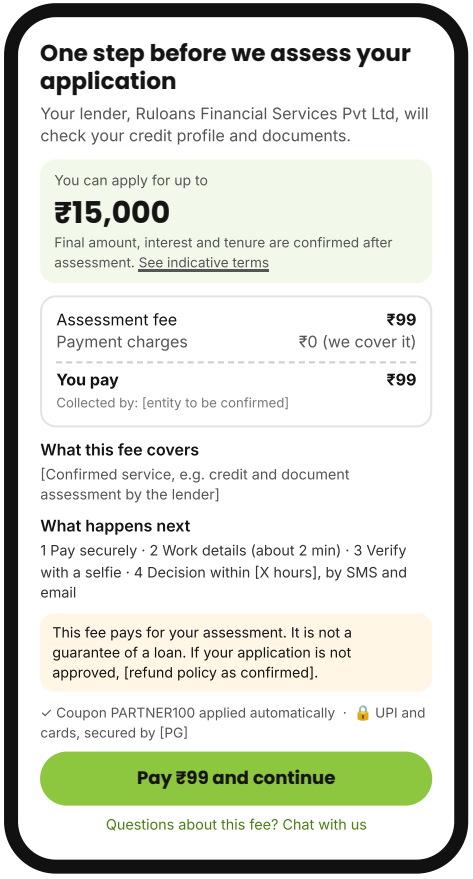

Under the RBI (Digital Lending) Directions, 2025, fees or charges owed to a Lending Service Provider must be paid by the regulated lender itself, not charged to or collected from the borrower by the LSP [1]. Which entity charges this ₹99, and for what service, therefore matters.

The CCPA's 2023 dark-pattern guidelines name false urgency (including countdown-style pressure) and drip pricing (cost elements revealed late, or charging more than the amount shown) among 13 specified patterns [2]. The timer and the ₹2.36 gap should be reviewed against them.

These are not legal conclusions. They are the reasons the open questions on page 6 should go to the lender's Compliance and Legal teams.

A fee page that is clear, consistent and compliant

Concept only. Bracketed text needs confirmation from RapidMoney and the lender. No urgency, no reference price without a basis, and no approval language before a decision.

Proposed concept, not a current RapidMoney screen

Information hierarchy

1. Heading that names the next step, not a celebration
2. Who assesses: the lender, by legal name
3. One offer amount, consistent everywhere, with “confirmed after assessment”
4. Fee, any charges, and one total, before payment
5. What the fee covers (only once confirmed)
6. What happens next, with a time the business can keep
7. Non-guarantee and refund terms beside the price, not below the CTA
8. Coupons auto-applied when eligible; none listed that do not work
9. Secure-payment line naming the methods
10. CTA with the amount: “Pay ₹99 and continue”; help link

A fee transaction is not a lending outcome

Fee page viewed → Paid → KYC done → Decision → **Disbursed**

Report the fee by what it leads to: payment → KYC, payment → decision within SLA, payment → disbursal, and fee payers with no loan. Net the fee against gateway cost, refunds, chargebacks and support contacts it creates.

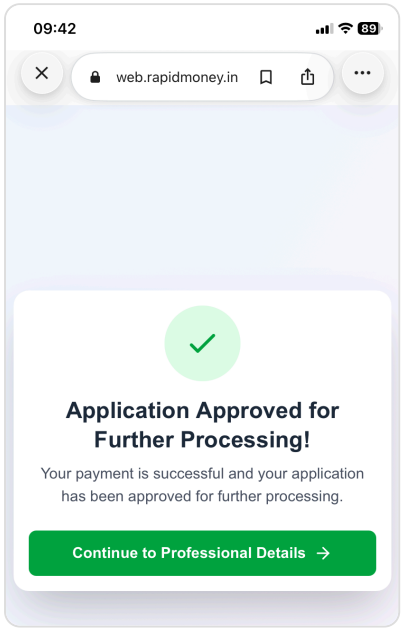

Open questions for Compliance and Legal

COMPLIANCE QUESTION

1. Which entity charges and receives the ₹99: Ruloans (lender) or Moneytime (LSP)? If the LSP, how does this fit the RBI rule on LSP fees [1]?
2. What service does the fee represent, and does it appear in the lender’s fee schedule, the KFS and the APR?
3. Refund treatment if the customer declines consent, fails KYC, is rejected, or gets no decision.
4. What is the ₹2.36, and where is it disclosed?
5. What was the pre-qualified ₹15,000 based on, and under which consent, given explicit bureau consent comes later?
6. Basis for the ₹249 reference price and the timer.
7. If RapidMoney works with several lenders, how are offers shown under the multi-lender LSP provisions?
8. Can marketing consent be a condition of applying?

After payment, the journey should only move forward

A customer who has just paid has the highest intent in the funnel and the least tolerance for confusion. Five screens after payment either add a step, repeat a request, or contradict an earlier message.

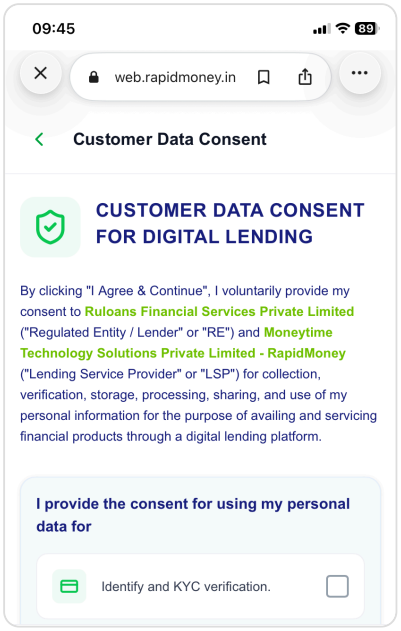

Interstitial · 09:42

OBSERVED

Says "approved" before assessment; one extra tap.

PROPOSAL

Remove. Show "Payment received ₹99" inline on the work-details screen.

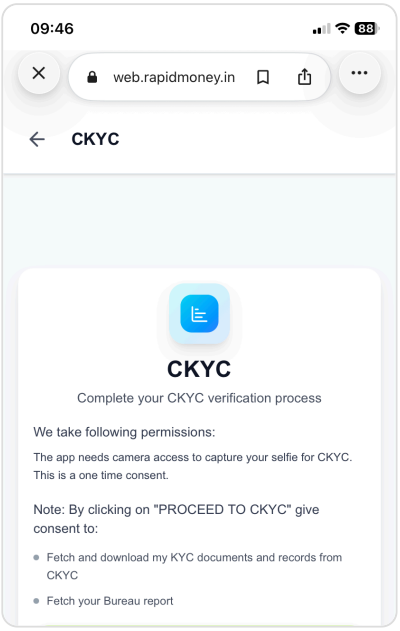

Consent · 09:45

OBSERVED

Six required boxes; CTA locked until all ticked; marketing bundled with loan-servicing calls.

PROPOSAL

One screen; required purposes in plain words with expandable detail; marketing a separate optional toggle; Ruloans and Moneytime both named.

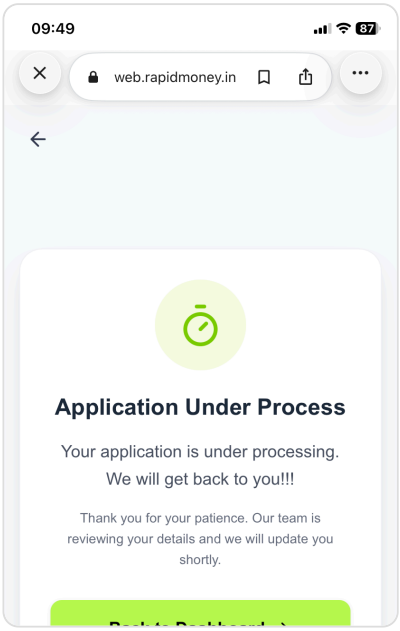

CKYC · 09:46

OBSERVED

A screen to start a background fetch; repeats bureau consent.

PROPOSAL

Run CKYC after consent in the background; go straight to selfie.

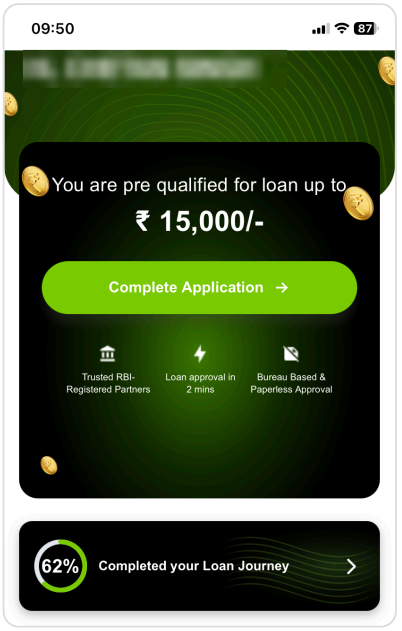

Under process · 09:49

OBSERVED

No timeline; "!!!"; no SMS or email followed.

PROPOSAL

State what is being checked, a time the team can meet, and send SMS and email.

Dashboard · 09:50

OBSERVED

"Complete Application", 62%, "approval in 2 mins" while under review.

PROPOSAL

Dashboard mirrors one backend state with one next action, or "nothing needed".

One status model, used by every screen

Payment received → Details needed → Verifying identity → Under review · ETA → Decision

Each state has one customer action or says "nothing needed". The dashboard, history, SMS and email read from the same state.

"Decline & Exit" after payment

HYPOTHESIS A customer who declines here has paid and cannot proceed. My note suggests "Go to dashboard"; I would keep the decline option visible and add what it means: "Not now. Your application stays saved. [Fee and refund position as confirmed]." Sequencing consent before payment removes the problem at the source.

Words that say what is happening, not what the system calls it

Existing copy is quoted from the screenshots. Suggested copy is shorter, uses everyday words, and never implies approval before a decision. Bracketed values need confirmation. A Hindi and regional-language pass should follow, consistent with the KFS language choice already offered.

Existing (observed)	Customer problem	Suggested wording	Reason
Congratulations! You are Pre-Qualified...	Celebrates before any decision	**Good news: you can apply for up to ₹15,000**	Honest, still positive
25% Off · ₹249 ₹99	Label does not match the maths	**Assessment fee: ₹99**	One correct number
Offer ends in 4:46 min	Pressure at payment	**(remove)**	False-urgency risk
RBI Approved · Powered by RBI NBFC	Overstates RBI's role	**Lender: Ruloans Financial Services Pvt Ltd, an RBI-registered NBFC**	Accurate, verifiable (confirm registration)
Approved Lenders	"Approved" before assessment	**Your lender**	Neutral
...consent to pay the applicable Assessment Fee (AF)...	Legal, abbreviated	**This fee pays for your assessment. It is not a guarantee of a loan.**	Plain purpose first
PROCEED	Hides that money moves	**Pay ₹99 and continue**	Amount in the CTA
Application Approved for Further Processing!	Mixed with "check eligibility"	**Payment received. Next: your work details (about 2 min)**	Sets the next step
Professional Details	Business jargon	**Your work and income**	Everyday words
Residence Status	Unclear, wrong section	**Do you own or rent your home?**	Question form
Mode of Salary	Jargon	**How do you receive your salary?**	Question form
KFS Language	Unexplained acronym	**Language for your loan summary (Key Fact Statement)**	Explains, keeps the term
Submit & Check Eligibility	Contradicts "approved"	**Submit and continue**	Consistent status
Customer Data Consent for Digital Lending	Legal heading, all caps	**Allow us to verify you and check your credit**	Says why
PROCEED TO CKYC · We take following permissions	Acronym, grammar	**Verify your identity from the central KYC registry (CKYC)**	Explains the step
A clearly visible face will get approved fast	Implies approval	**A clear photo helps us verify you faster**	No approval claim
Your application is under processing. We will get back to you!!!	No time, no channel	**We're reviewing your application. Expect an update by [time], by SMS and email.**	Timeline and channel
Complete Application · 62%	Contradicts review state	**Under review: nothing needed from you**	Matches backend state
State: MH	Abbreviation	**Maharashtra**	Readable

Measure the journey the way the customer moves through it

Twelve funnel stages, each with an entry event, a completion event and a failure event. Stages marked * were not observed and come from the standard digital-lending sequence. The full plan, with properties, is in the companion workbook.

Started → OTP → Basic details → **Fee page** → Pay initiated → **Paid** → Work details → Consent → KYC done → Approved* → Signed* → Disbursed*

Stage	Events	Key properties	Metric
Mobile OTP	`mobile_otp_verified / _failed`	attempt_no, failure_reason	OTP success
Basic details	`basic_details_submitted, field_error_shown, session_expired`	field_name, error_type, time_on_screen_s, prefill_used	Completion, expiry rate
Fee page	`assessment_fee_page_viewed`	offer_amount_shown, lender_offer_amount, fee_shown, timer_shown	Fee page reach
Coupon	`coupon_applied / coupon_failed`	coupon_code, failure_reason	Coupon failure
Payment	`assessment_fee_payment_initiated / _pending / _success / _failed`	amount_shown, amount_charged, method, failure_code, retry_no	Initiation, success, amount gap
Work details	`employment_details_submitted`	fields_changed, time_on_screen_s	Completion
Consent	`data_consent_submitted / _declined`	purposes_accepted[], marketing_opt_in, paid_before	Decline after payment
KYC	`ckyc_fetch_result, liveness_result, address_confirmed, kyc_completed`	ckyc_found, address_changed	KYC completion
Review	`application_under_review_viewed, status_notification_sent`	sla_shown, channel	Time to decision
Decision → disbursal	`loan_approved / _rejected, kfs_viewed, agreement_signed, loan_disbursed`	reason_category, kfs_language, apr_shown, tat_hours	Approval, sign, disbursal
Support	`help_opened, ticket_created`	screen, topic (fee, status, refund)	Contacts per payer

Every event carries application_id, user_id, platform (web/app), session_id and lender_id so client and server events join.

How the analytics setup would work

- **Server-side truth** for payment, KYC and decision events; client events for views, field errors and taps.
- **Mixpanel or Amplitude** for funnels by stage, time-to-convert and cohort breakdowns (source, device, coupon used).
- **CleverTap** (or equivalent) for consented recovery journeys triggered by the same events.
- A daily **"paid, no decision"** report, owned by Ops, against a stated SLA.

Recovery opportunities

Trigger	Recovery action
session_expired	Resume link by SMS, form state kept
Fee page viewed, not paid (24 h)	One reminder with terms; no urgency
Paid, consent not given	Priority nudge plus assisted call
payment_failed / pending	Clear state, safe retry, no double charge
Under review past SLA	Proactive status update

Guardrails on every test

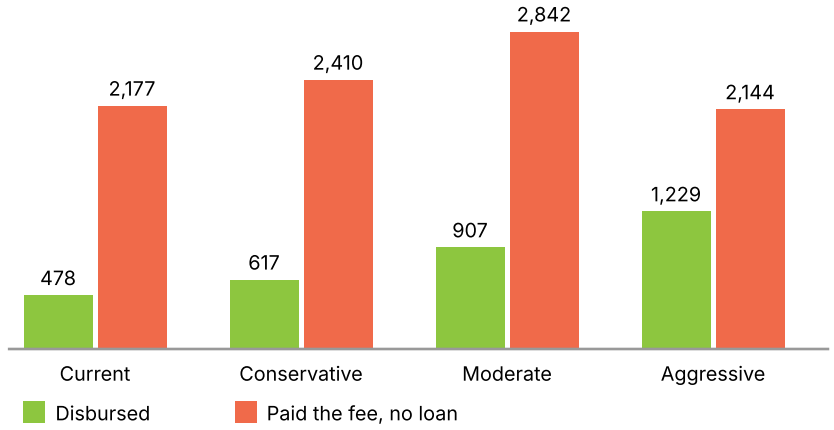

KYC failure · Fraud flags · Approval → disbursal · Refunds, chargebacks · Fee complaints · Duplicate payments · Contacts per payer

An illustrative model: the goal is disbursals, not fee volume

All numbers are illustrative assumptions, not RapidMoney data. 100,000 monthly visitors, fee ₹99, ₹600 net contribution per disbursed loan. Each scenario changes only the stage rates named in its mechanism. Every input is editable in the workbook.

Illustrative · per month	Current	Conservative	Moderate	Aggressive
Visitors (input)	100,000	100,000	100,000	100,000
Basic details submitted	12,750	13,388	14,875	14,875
Fee page viewed	8,925	9,371	10,412	8,925
Fee paid	2,655	3,027	3,748	3,374
KYC completed	1,439	1,805	2,545	2,860
Disbursed	478	617	907	1,229
OUTCOMES				
A Application completion (KYC ÷ started)	5.8%	7.2%	10.2%	11.4%
B Fee page → payment initiated	35.0%	38.0%	40.0%	42.0%
C Payment success	85.0%	85.0%	90.0%	90.0%
D Payment → disbursal	18.0%	20.4%	24.2%	36.4%
E Visitor → disbursal	0.48%	0.62%	0.91%	1.23%
G Incremental disbursals	—	+139	+428	+751
H1 Fee revenue, net	₹2.63 L	₹2.93 L	₹3.62 L	₹3.26 L
H2 Lending contribution	₹2.87 L	₹3.70 L	₹5.44 L	₹7.38 L
H3 Total contribution / month	₹5.50 L	₹6.63 L	₹9.06 L	₹10.64 L
I Fee payers not disbursed	2,177	2,410	2,842	2,144
J Share of fee payers not disbursed	82.0%	79.6%	75.8%	63.6%

Current-state rates are placeholders chosen to be plausible, not benchmarks. Lifts compound across stages, so small per-stage changes produce large end-to-end differences; that is a reason to measure each stage, not to trust the totals.

What the model shows

- **Moderate** lifts disbursals from 478 to 907, yet fee payers with no loan rise from 2,177 to 2,842. More payment does not mean better lending.
- **Aggressive** earns less fee revenue than Moderate (₹3.26 L vs ₹3.62 L) but the highest total contribution (₹10.64 L) and the lowest share of payers without a loan (63.6%).
- Four different goals: more **fee collections**, more **qualified applications**, more **disbursals**, more **contribution**. Only the last two should be the North Star; fee volume is a guardrail-watched input.

Scenario mechanisms

Conservative: Copy and consistency only: one offer amount, correct discount, working coupon, session timeout, no interstitial, plain consent text.

Moderate: Adds PAN-led prefill, one consent screen, background CKYC, payment retry states.

Aggressive: Adds consent, CKYC and selfie **before** the fee page. Fewer reach the fee page; more payers reach a decision. Credit policy is unchanged in every scenario.

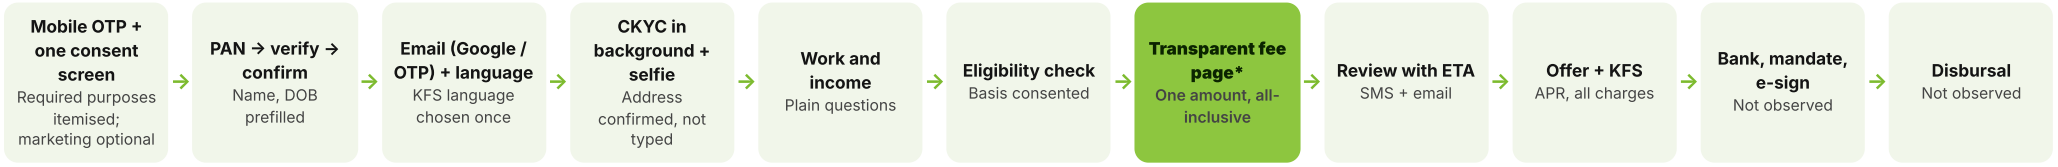

Fix what is cheap and certain first; re-sequence once measured

RICE = Reach × Impact × Confidence ÷ Effort. Reach is monthly users touching the step in the illustrative current state (linked in the workbook). Impact 0.25–3. Effort in person-months, including compliance, risk and vendor dependencies.

Rank	Opportunity	Reach	Impact	Conf.	Effort	RICE	Bucket
1	Extend basic-details session timeout (~2 min to 10 min)	21,250	0.5	80%	0.25	**34,000**	Quick win
2	Event instrumentation across web journey (Mixpanel/CleverTap/Amplitude)	100,000	1	100%	3	**33,333**	Strategic (enabler)
3	Fix fee-page inconsistencies: one offer amount, correct discount label, working coupon	8,925	2	80%	0.5	**28,560**	Quick win
4	Remove countdown timer; correct "RBI Approved" trust badge	8,925	1	50%	0.25	**17,850**	Quick win
5	Show one all-inclusive amount before payment (no extra at gateway)	8,925	1	80%	0.5	**14,280**	Quick win
6	PAN-led verify-and-prefill (name, DOB) with customer confirmation	21,250	2	60%	3	**8,500**	Medium-term
7	Remove post-payment "Approved" interstitial; consistent status words	2,655	1	80%	0.25	**8,497**	Quick win
8	Verify email (Google sign-in or OTP)	21,250	0.25	70%	1	**3,719**	Medium-term
9	Re-sequence consent + CKYC + selfie before the fee page	12,750	3	40%	6	**2,550**	Strategic
10	Status page with timeline + SMS/email + correct dashboard state	2,655	2	80%	2	**2,124**	Medium-term
11	Plain-language employment form; move residence + KFS language	2,655	0.5	70%	0.5	**1,859**	Quick win
12	One consent screen: required purposes itemised, marketing optional	2,257	2	60%	1.5	**1,806**	Medium-term
13	Payment pending/failure states, safe retry, idempotency	3,124	1	60%	1.5	**1,250**	Medium-term
14	Background CKYC fetch; drop CKYC interstitial	1,918	1	60%	1.5	**767**	Medium-term

Instrumentation ranks high because it touches every user; treat it as the foundation that makes every other score measurable. Fee-page fixes that are compliance-driven (amount consistency, all-inclusive price, coupon) should ship regardless of score.

Future-state journey (concept)

* Only if the fee is confirmed permissible as designed, and placed after consent and identity checks. Order to be validated with the lender's operational and regulatory requirements.

Test, measure, and keep the guardrails in view

Segment: new web applicants on mobile, randomised by user. Events come from page 9. Eligibility, pricing, risk thresholds and legally required steps are never varied to lift conversion. A larger pilot of re-sequencing consent and KYC before the fee follows once E1–E5 have set baselines.

Experiment	Problem	Hypothesis	Control vs variant	Primary metric	Guardrails	Events	Expected learning	Decision rule
E1 Fee-page clarity	Customers may not trust or understand what they pay for.	A clearer hierarchy raises paid-per-view without raising post-payment drop.	Ship compliance fixes to all. Test layout: current layout (fixed) vs redesigned hierarchy.	Fee page view → payment success	Payment → KYC done; fee complaints; refund requests	`assessment_fee_page_viewed, _payment_initiated, _payment_success, help_opened`	Whether clarity costs or earns payments	Clear lift in primary, no guardrail worse
E2 Session and resume	Session expired ~2 min into the longest form.	A 10-min session that keeps data raises basic-details completion.	Current timeout vs 10 min + saved form + SMS resume link.	Basic-details completion	OTP abuse, account-takeover signals	`session_expired, basic_details_submitted`	Whether expiry is a real drop driver	Lift with stable fraud signals
E3 PAN-led prefill	Seven typed fields invite errors and drop-off.	Verify-and-confirm cuts time and errors.	Manual form vs PAN → verify → confirm.	Completion and median time on step	PAN-name mismatch at KYC, cost per call	`basic_details_submitted (prefill_used), field_error_shown, kyc_completed`	Value of verified data vs its cost	Lift and lower KYC mismatch, cost acceptable
E4 One consent screen	Six mandatory boxes after payment.	Plain, itemised single consent raises completion.	Six boxes vs one screen, marketing optional (Legal-approved copy only).	Consent completion	Consent withdrawals, complaints, marketing opt-in honesty	`data_consent_viewed, _submitted, _declined`	How much consent design drives exits	Lift with no complaint increase
E5 Status and updates	No timeline or messages after paying.	A stated ETA and SMS/email cut contacts and repeat visits.	Current review screen vs timeline + notifications + corrected dashboard.	Support contacts per fee payer	Approved → signed, SLA breaches	`application_under_review_viewed, status_notification_sent, ticket_created`	How much uncertainty drives contacts	Fewer contacts, no SLA breach rise

Questions for RapidMoney before finalising

- Stage-wise funnel volumes for the web journey, and how they compare with the app.
- Share of fee payers who reach a decision, and the decision SLA.
- Why the session times out at about two minutes on basic details.
- Why the Partner100 coupon is listed but rejected; why offer amounts differ.
- Fee entity, purpose and refund policy (see page 6).

All journey observations are my own first-person research; screenshots redacted for personal data.

The opportunity is to ask less before the money, explain more at the money, and make every paid application move to a decision. That grows disbursals and contribution, and protects trust.
